Allowable Subject Matter

1. Claims 34-67 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

Applicants have amended the claims in according with the office action dated 11/26/04. The present invention relates to method and apparatus for removing interference in a mobile system. Prior art method and apparatus for removing interference at the receiver including the use of antenna array, beamformer and rake receiver are known. However, upon further consideration, prior art of record, taking individually or collectively, fails to disclose the particular method and apparatus for removing the interference, as claimed, including "an arrangement for dividing an area of coverage of said receiver into a plurality of sections; a plurality of receiving units, each of said plurality of receiving units being arranged to process a different one of said signals to identify the at least partially known part of said signals; a controller coupled to the output of the dividing arrangement for selecting the signals which are to be allocated to the respective receiving units; and an interference removing arrangement coupled to the output of said receiving units to remove interference based on signal information from the plurality of sections" in independent claim 34 (claims 35-64 depend therefrom) and similar claimed subject matter in independent claims 65-67. Thus, claims 34-67 are found to be novel and unobvious over prior art of record.
